**Description:** Reliance Valves 320 Easetet Pressure Reducing Valve (PRV) must be WRAS approved, for use on cold water systems up to 45°C and pressure setting must be adjustable between 1.5 – 6.0 bar. A single gauge port must feature on the base of the valve and the valve must include fully serviceable strainers. The one-piece cartridge drop tight design must continue to control pressure under flow and no flow conditions. The PRV must be able to be installed in any orientation, and work to a 10:1 pressure ratio between inlet and outlet pressure.
