Description: Reliance Valves Tenant Valve Advance must be a WRAS approved one piece control manifold incorporating, in the following order, an extended lever isolating ball valve, a cartridge type pressure reducing valve with integral in-line strainer, serviceable double check valve, dual-reading pressure gauge and a connection point for an optional primary charging water meter. The pressure gauge shall be double reading to show both inlet and outlet pressure. The assembly shall be supplied in a purpose built insulated cover and all components shall be accessible from the front of the valve.
